HAVU

HAVU trail game in GitHub

HAVU Trail Game is a free, mobile-based outdoor adventure platform suitable for all ages. It helps users explore nature, discover points of interest, and access information, activities, and services provided along a route.

The game was provided by the HAVU project (Well-being and experiences from private forests through new technologies). It was implemented by the University of Vaasa. The final version of the platform was released in June 2026. The University of Vaasa will maintain the platform until June 2029.

HAVU is an open-source platform. The source code, technical documentation, and additional information are available on [GitHub](#)

You are welcome to deploy the platform on your own server and adapt it for your own routes, services, educational activities, or outdoor experiences.
